

Instructions for Map Viewer

In the Map viewer you can view AMS maps, atlas maps, base maps and satellite imagery, and various other map layers. You can also search place names, farms, street names, etc. You can get your location, locate and mark coordinates on the map and get more information about map layers if you click on them on the map.

Map layers

Select background map

- AMS
- Atlas
- Infrared Satellite image
- Landscape
- Map
- Satellite image

Select other map layers

- Geographical Names, IS 50V
- Roads, IS 50V
- Historical maps
- Historical photos
- Land cover, CORINE 2012
- Land Cover, CORINE 2006 updated
- Land cover, CORINE 2006
- Changes , CORINE 2006-2012
- Changes , CORINE 2000-2006
- Land cover, CORINE 2000
- Urban areas, IS 50V
- Structures in rural areas, IS 50V

Here you can select background map layers.

You can click on the map itself when the map layers have been selected and get information. For example if the historical photos are selected, you can click on the map and see the photos. Alternatively, if land cover Corine 2012 is selected, you can click on the map and get more information.
